Product Overview

Professional Construction Lifting Solution

This high-capacity construction tower crane is engineered for efficiency and safety on demanding job sites. Featuring a robust lattice-structured vertical mast and a precision-controlled horizontal jib, it is designed for lifting heavy materials such as concrete, steel, and prefabricated components. Its stable counterweight system and advanced trolley mechanism ensure reliable performance at significant heights.

Key Performance Metrics

Annual Production Capacity

4000 units

Tower Cranes

Technical Features

Available Series	Hammerhead, Flattop
Build Quality	Robust heavy-duty steel construction for long-term durability and reliability

Application Areas

Industry Applications

- Residential construction
- Road and bridge development
- Industrial facilities
- Power engineering
