

Container Handling Crane

This crane is designed for loading and unloading cargo containers from ships. It features a main support frame, a boom extending over the ship, and a trolley system.

Overview

Professional Container Handling Solutions

This container handling crane is engineered for high-efficiency port operations, designed to facilitate the rapid loading and unloading of cargo containers from docked vessels. Featuring a robust main support frame and an advanced boom and trolley system, it ensures precise movement and safe handling of shipping containers. Built for demanding maritime environments, this equipment is an essential asset for logistics hubs and shipping terminals requiring reliable, heavy-duty cargo management.

Technical Specifications

Key Components

- Main support frame
- Extendable boom
- Trolley system

Equipment Type

Container Handling Crane

Primary Application

Port Operations, Cargo Loading, Ship-to-Shore Logistics
