

Continuous Slot Pre-Pack Gravel Screen

This screen provides a viable and cost-effective alternative to conventional gravel packs. The factory-installed ceramic beads fill the annulus between the inner and outer screen barrels.

Overview

Continuous Slot Pre-Pack Gravel Screen

The Continuous Slot Pre-Pack gravel screen is a proven, cost-effective alternative to conventional gravel packs. Designed for high efficiency, it features factory-installed ceramic beads that fill the annulus between the inner and outer screen barrels. This advanced design ensures uniform filter media distribution and consistent filling, leading to faster well completion and lower overall project costs.

Key Features

Key Advantages

- Uniform filter media distribution
- Consistent bead fill
- Increased tensile strength
- Improved collapse resistance
- Faster well completion
- Lower overall project cost
