

Continuous Textile Desizing Scouring Bleaching Range

The continuous textile processing system is designed for efficient and high-quality preparation of fabrics. This range integrates desizing, scouring, and bleaching processes into a single, streamlined operation, reducing processing time and costs.

Overview

Continuous Textile Processing System

The LMA043 Desizing, Scouring & Bleaching Range is a continuous textile processing system designed for efficient and high-quality preparation of fabrics. This range integrates desizing, scouring, and bleaching processes into a single, streamlined operation, reducing processing time and costs. The modular design allows for customization to suit specific fabric types and production requirements, ensuring thorough removal of sizing agents, impurities, and natural colorants.

Technical Capabilities

Compatible Materials

- All Cotton
- Manmade Fibre
- Blended Fabrics

Supported Processes

Desizing, Scouring, Bleaching

Key Features

Key Features

Continuous Operation • Modular Design • Advanced Chemical Dosing • Precise Temperature Control • Optimized Fabric Transport

Operational Benefits

- Reduced processing time
- Lower operational costs
- Uniform treatment
- Minimal fabric damage
- Consistent performance
