

Conventional Welding Roller Bed

The KT Series conventional welding roller bed offers adjustable rotating speeds to meet specific customer needs. It is capable of handling rollers exceeding 100 tons and specialized welding applications.

Product Overview

Versatile Welding Support

The Conventional Welding Roller Bed is designed to provide stable support and rotation for cylindrical workpieces during welding processes. With highly customizable rotation speeds, it can be tailored to meet specific manufacturing requirements. The system supports heavy-duty applications, including capacities exceeding 100 tons, and offers flexible center distance adjustment options for various workpiece sizes.

Technical Capabilities

Load Capacity

100 Tons

Minimum Capacity

Customization Features

- Customizable roller rotation speed
- Heavy-duty configurations over 100 tons
- Specialized welding roller bed designs

Adjustment Mechanisms

Manual Adjustment, Motorized (Screw) Adjustment, Adjustable Center Distance

Roller Diameter

444 mm
