Product Overview

Professional Edge Repair Solution

This specialized vulcanizing press is engineered for the efficient repair and maintenance of conveyor belt edges in demanding industrial environments. Utilizing a hydraulic pressure system and integrated heating elements, it ensures uniform heat distribution and precise pressure control for durable, high-quality repairs. Designed for on-site reliability, this equipment is an essential tool for maintenance teams in sectors such as mining, metallurgy, and quarrying.

Technical Features

Pressure Mechanism	Hydraulic pressure system with integrated gauge for precise control
Heating Method	Integrated heating elements in clamping plates for uniform distribution
Control Interface	Digital displays and switches for temperature and pressure management

Applications

Target Industries	Metallurgy, Mining Engineering, Nonmetal Mining, Quarrying
-------------------	--

Certifications

Quality & Safety Standards

CE • ISO 9001:2008 • GIC Certified • Guardian Certified
