

# Conveyor Belt Vulcanizer for Long Tears

This rubber belt vulcanizer is used for splicing and repairing conveyor belts in industries like metallurgy, mining, and power plants. Cross beam repair vulcanizers can be customized for spot and rip repairs based on specific requirements.

## ADDITIONAL IMAGES

## Overview

### Industrial Conveyor Belt Vulcanizer

This specialized vulcanizing equipment is engineered for the professional repair of long tears in conveyor belts. Designed for durability and efficiency, it utilizes precise temperature control and pressure mechanisms to restore belt integrity in demanding mining, logistics, and manufacturing environments. Its robust construction ensures reliable performance, significantly extending the service life of critical material handling components and reducing operational downtime.

## Technical Specifications

### Key Performance Indicators

**150 cm**

Model Capacity

**200 K**

Heating Power

### Build Materials

- Aluminum
- Copper
- Reinforced Metal Frames

## Certifications

### Quality & Standards

CE, ISO Certified, Independent Audited
