

# Coolant Liquid Circulation Pump for Agricultural Machinery

This coolant pump is designed for use in agricultural machinery, specifically for drainage and irrigation purposes. It features a compact design with a durable construction.

## Overview

### High-Efficiency Coolant Circulation Pump

This coolant liquid circulation pump is engineered specifically for agricultural machinery, providing reliable performance for drainage and irrigation requirements. Featuring a compact and durable construction, it ensures stable operation through its sturdy base design. This electrically powered unit is an ideal solution for various coolant pumping applications in demanding agricultural environments.

## Technical Specifications

Pump Series	D Type
Power Source	Electric
Primary Applications	Agricultural Machinery, Drainage, Irrigation, Coolant Circulation

## Design Features

### Design Highlights

- Compact design for easy integration
- Durable construction for harsh environments
- Sturdy base for stable operation
