

Copper Aluminum Radiator for HVAC Systems

This radiator is constructed from copper and aluminum for optimal heat transfer. It is designed for residential or commercial heating systems, providing reliable performance and efficient energy usage.

Product Overview

High-Efficiency HVAC Heating Solution

This copper and aluminum radiator is engineered for optimal heat transfer in both residential and commercial HVAC systems. Featuring a durable multi-section design, it maximizes surface area for effective heat dissipation and reliable performance. The unit comes complete with necessary mounting hardware to facilitate straightforward installation.
