

Copper Coiled Pipe for Water Heaters

High-quality copper pipe designed for efficient heat transfer in water heating systems. The coiled design maximizes surface area and improves thermal conductivity.

Product Overview

High-Efficiency Heat Transfer Solution

This high-quality copper pipe is specifically engineered for optimal performance in water heating systems. Its unique coiled design maximizes surface area to significantly improve thermal conductivity and heat exchange efficiency. Constructed from durable, corrosion-resistant copper, this component is built for long-lasting reliability in both residential and commercial water heating applications.

Material & Construction

Material	Copper
Design	Coiled

Performance Features

Key Benefits	High Thermal Conductivity, Corrosion Resistant, Optimized Surface Area, Durable
--------------	---------------------------------------------------------------------------------

Applications

Suitable Applications

- Residential Water Heaters
- Commercial Water Heaters
