

Copper Compression Olive

This copper olive is a compression fitting used for creating secure connections between pipes. It is suitable for plumbing and hydraulic systems.

Product Overview

Copper Compression Olive

The copper olive is an essential component in compression fittings, designed to create a secure, leak-proof connection in plumbing and hydraulic systems. As a small, ring-shaped part, it is compressed between the nut and the fitting body to ensure a tight, reliable seal. Crafted from high-quality copper, these olives offer exceptional durability and resistance to corrosion, making them a standard choice for professional piping installations.
