

Copper Pipe Fittings for Plumbing and HVAC

These copper pipe fittings are designed for plumbing and HVAC applications. They offer excellent corrosion resistance and high thermal conductivity for reliable performance in water, gas, and refrigerant systems.

Product Overview

High-Performance Copper Fittings

These high-quality copper fittings are engineered for demanding plumbing, HVAC, and industrial applications. Designed for superior corrosion resistance and high thermal conductivity, they ensure reliable performance in critical systems. They are compatible with water, gas, and refrigerant copper piping, offering a versatile solution for professional installations.

Technical Specifications

Available Configurations

- Couplings
- Elbows
- Tees
- Adapters

Material	Copper
Applications	Plumbing, HVAC, Water Systems, Gas Systems, Refrigerant Systems, Industrial

Key Features

Performance Highlights

1 High

Corrosion Resistance

1 High

Thermal Conductivity
