

Copper Plated Steel Grounding Rods with Brass Clamps

Copper plated steel grounding rods are designed for effective grounding. Brass clamps offer secure connections, ensuring electrical safety in various systems.

Product Overview

High-Performance Grounding Solutions

These copper-plated steel grounding rods, paired with durable brass clamps, provide a reliable and efficient solution for electrical safety. Engineered to dissipate fault currents effectively, the copper plating offers superior conductivity and long-term corrosion resistance. This combination is an essential component for ensuring structural integrity and safety in residential, commercial, and industrial electrical systems.

Technical Specifications

Material Composition	Copper Plated Steel, Brass
Primary Function	Electrical grounding and fault current dissipation

Key Features

Key Benefits

- Excellent electrical conductivity
- High corrosion resistance
- Durable and secure connections
- Suitable for diverse electrical systems

Applications

Application Areas

Residential • Commercial • Industrial
