

Cordless Jig Saw for Wood and Metal

This cordless jig saw is a versatile power tool designed for making curved and intricate cuts in various materials such as wood, plastic, and metal. It features a powerful motor, variable speed control, and a tool-free blade change system for efficient operation.

Product Overview

Versatile Cordless Cutting Performance

This cordless jig saw is engineered for precision and efficiency, capable of handling intricate curve cuts across wood, metal, plastic, and various board materials. Featuring a high-performance DC motor and a compact, lightweight fuselage, it is designed for comfortable one-handed operation. The tool incorporates a balanced mechanism to minimize vibration, ensuring cleaner cuts and reduced operator fatigue during extended use.

Technical Specifications

Power System

20 V
Voltage

Design Highlights

- Adjustable cutting angle
- Built-in LED work light
- Compact and lightweight fuselage
- Low-vibration balancing mechanism

Safety & Protection

Over-current protection, Over-voltage protection, Under-voltage protection, Over-temperature protection, Charge/Discharge protection, Anti-self-locking switch

Durability & Build

Engineered for Reliability

The internal transmission components are constructed from high-performance materials and have undergone rigorous heat treatment processes. This engineering focus ensures consistent performance and extends the overall service life of the tool, making it a reliable choice for professional applications.
