

Core Bit Blanks for Drilling

Core bit blanks are designed for creating precision holes in concrete, stone, and masonry. They are manufactured from durable steel alloy for longevity and consistent performance.

Product Overview

Precision Core Bit Blanks

These core bit blanks are engineered for high-performance drilling across concrete, stone, and masonry applications. Manufactured from durable steel alloy, they offer consistent longevity and reliable performance for professional drilling tasks. Designed with a standardized connection, these blanks integrate seamlessly with standard core drilling machinery, ensuring efficient and precise hole-forming.

Technical Specifications

Material	Durable steel alloy
Compatible Materials	Concrete, Stone, Masonry
Connection	Standardized connection

Usage

Recommended Users

Professional Contractors • DIY Enthusiasts
