

Corrugated Plastic Pipe Extrusion Line

This complete extrusion line manufactures corrugated plastic pipes. The system includes an automatic coiler, extruder unit, control panel, and die head.

Overview

High-Efficiency Corrugated Pipe Production

This complete extrusion line is engineered for the continuous manufacturing of high-quality corrugated plastic pipes. The integrated system streamlines the production process, incorporating an automatic coiler, precision extruder unit, and specialized die heads for consistent shaping. Designed for versatility, this line supports the production of pipes in various colors to meet diverse industrial requirements.

Technical Capabilities

System Components

- Automatic Coiler
- Extruder Unit with Rollers
- Control Panel
- Die Head

Certifications
