

# Corrugated Plastic Pipe

Corrugated plastic pipes are designed for drainage and underground applications. The exterior features a corrugated pattern for enhanced strength, while the interior provides a smooth surface.

## Product Overview

### High-Performance Corrugated Plastic Piping

These corrugated plastic pipes are engineered for superior durability and flexibility in underground drainage and culvert applications. Featuring a robust black corrugated exterior for structural integrity and a smooth light blue interior for optimal flow, they are designed to withstand significant environmental stress. This combination of strength and smooth-bore design ensures long-term reliability for heavy-duty infrastructure projects.

## Physical Properties

Exterior Color

Black

Interior Color

Light Blue

Exterior Design

Corrugated

Interior Finish

Smooth

## Applications

Common Applications

Drainage, Culverts, Underground Infrastructure
