

Countertop Alkaline Water Ionizer

This advanced alkaline water ionizer is designed for home use. It features a digital display for monitoring pH levels and settings, and it uses electrolysis to separate water into alkaline and acidic streams.

Product Overview

Advanced Countertop Water Ionization

This countertop alkaline water ionizer features an advanced electrolysis system designed for precise water quality control. Equipped with a color-coded interface and dynamic display, it provides real-time monitoring of pH levels, flow rates, and filter life. Built for durability and performance, the unit utilizes platinum-coated titanium electrodes and high-capacity transformers to ensure stable operation and longevity.

Technical Specifications

Electrolysis Programs	4 programs
Voltage Control	Automatic and Manual
Electrode Material	Titanium coated with platinum
Transformer Type	Super capacity cycle silicone-steel

Features & Functionality

Display Indicators	pH Value, Flow Rate, Temperature, Filter Life, Constant Value
Rinsing System	Double reverse-rinse (Automatic on/off)

Filtration

Filtration Benefits

- Removes heavy metals
- Inhibits bacterial growth
- Includes complex isolation membrane

Performance Metrics

System Performance

20 levels

Potential Controls

3 x

Membrane Lifespan Multiplier
