

CPM158 Centrifugal Water Pump

The CPM158 centrifugal pump is engineered for efficient fluid transfer in various applications. Designed for optimal hydraulic efficiency, it delivers high flow rates with minimal energy consumption.

Overview

CPM158 Centrifugal Water Pump

The CPM158 centrifugal pump is engineered for efficient fluid transfer in various applications, featuring a robust construction that ensures durability and reliable performance. Designed for optimal hydraulic efficiency, this unit delivers high flow rates with minimal energy consumption. Its compact design allows for easy installation and maintenance, making it an ideal choice for clean water and non-aggressive fluid handling in irrigation, water supply, and industrial processes.

Applications

Primary Use Cases

- Irrigation systems
- Water supply
- Industrial fluid transfer

Suitable Fluids

Clean water, Non-aggressive fluids

Design Features

Key Design Benefits

Compact Design • High Efficiency • Robust Construction • Low Energy Consumption
