

CPU Air Cooler with Copper Heat Pipes

This high-performance CPU air cooler is designed for efficient heat dissipation. It features a dense array of aluminum fins and multiple copper heat pipes for optimal thermal conductivity.

Overview

High-Performance Thermal Management

This CPU air cooler is engineered for efficient heat dissipation in demanding computing environments. Featuring a dense array of aluminum fins and multiple copper heat pipes, it ensures optimal thermal conductivity for stable performance under heavy loads. Designed for versatility and ease of use, it is compatible with various CPU sockets, making it an ideal choice for both standard builds and overclocking applications.

Key Features

Performance Metrics

120 mm

Fan Size

Cooling Technologies

Copper Heat Pipes, Aluminum Fin Array, High-Airflow Fan

Compatibility

Installation Features

- Wide CPU socket compatibility
- Easy installation design

Usage

Ideal Applications

Overclocking • Heavy Loads • High-Performance Computing
