

CPU Air Cooler with Heat Pipes

This high-performance CPU air cooler is designed for efficient heat dissipation. It features a dense fin stack, multiple heat pipes, and a high-airflow fan for optimal cooling.

Overview

High-Performance Cooling Solution

This CPU air cooler is engineered for efficient heat dissipation in demanding computing environments. It features a dense fin stack combined with multiple heat pipes and a high-airflow fan to maintain optimal operating temperatures. Built with premium materials, this cooler is designed for durability and long-lasting performance, making it a reliable choice for various system builds.

Technical Specifications

Construction

Premium Materials • Durable Design

Cooling Design

Dense Fin Stack, Multiple Heat Pipes, High-Airflow Fan

Compatibility

Wide range of CPU sockets
