

CPU Cooler with Aluminum Heatsink

This CPU cooler features an aluminum heatsink with a dense fin array for efficient heat dissipation. It is equipped with a low-noise fan for optimal cooling and quiet operation and is compatible with a range of CPU sockets.

Product Overview

Efficient Thermal Management Solution

This high-performance CPU cooler is engineered with a robust aluminum heatsink and a dense fin array to ensure maximum heat dissipation. It features an integrated low-noise fan that provides effective cooling while maintaining quiet operation for professional environments. Designed for broad compatibility and straightforward installation, this component offers a reliable solution for long-term thermal management in various desktop systems.

Technical Specifications

Operational Noise

Low-noise

Heatsink Material

Aluminum

Thermal Design

Dense fin array

Installation

Yes

Compatibility

Supported Sockets

Multi-socket compatible
