

Crawler Excavator Track Tensioner Assembly

This tensioner assembly is designed to maintain optimal track tension in crawler excavators. The heavy-duty coil spring and sturdy frame ensure smooth operation and prevent track slippage in demanding environments.

Product Overview

High-Performance Track Tensioning

This track tensioner assembly is engineered for reliable use in heavy-duty crawler excavators. It utilizes a robust spring mechanism to maintain optimal track tension, effectively preventing slippage during demanding excavation tasks. Designed for stability and durability, the unit ensures smooth operation and consistent track alignment under extreme working conditions.

Technical Features

Core Features

- Heavy-duty coil spring mechanism
- Optimized track tension maintenance
- Integrated tensioning wheel
- High-wear resistance construction
- Sturdy mounting frame interface

Materials & Certification

Quality Verified Materials, Rigorous Inspection Standard, Wear-Resistant Components

Application

Primary Application

Crawler Excavator Undercarriage Systems
