

Crawler Load Moving Skates

These crawler-type skates are designed for moving heavy loads with stability. Multiple rollers ensure smooth and efficient movement in industrial and construction environments.

Overview

Heavy-Duty Load Moving Solution

These crawler-type load moving skates are engineered for the most demanding industrial moving and handling tasks. Designed for stability and reduced friction, they allow for the efficient transport of heavy equipment and materials across warehouses, factories, and construction sites. Their robust construction ensures long-lasting performance even under significant load pressure.

Performance

Movement Features

- Crawler-type design for stability
- Multiple rollers for efficient movement
- Friction reduction technology
- Floor-material adaptable wheels

Load Handling Capability

100 %
Duty Rating

Suitable Applications

Warehouses, Factories, Construction Sites, Heavy Equipment Transport
