

Crawler Mounted Down-the-Hole Drill

This down-the-hole drill is widely used in cement, metallurgy, mine and quarry mining as well as the blasthole drilling for railway, highway, water conservancy and hydropower and national defense construction projects. It has an efficient high pressure down-the-hole drilling system which contributes to high precision, high efficiency drilling and blasting hole.

Product Overview

High-Performance Drilling Solution

The SWDA165 is a self-propelled, crawler-mounted down-the-hole drill engineered for efficient and precise drilling across diverse ground conditions. It features a robust drilling mast paired with a powerful pneumatic hammer to deliver high penetration rates and superior hole quality. Designed with operator comfort in mind, the unit includes a spacious cabin with ergonomic controls, while the advanced hydraulic system and crawler undercarriage ensure reliable, maneuverable performance in demanding environments.

Technical Specifications

Model	SWDA165
Drilling Type	Down-the-hole (DTH)
Mobility	Crawler-mounted

Key Features

Operational Highlights

- Self-propelled design
- Robust drilling mast
- Powerful pneumatic hammer
- Advanced hydraulic system
- Spacious, ergonomic operator cabin

Suitable Applications	Construction, Mining, Quarrying
