

# Crop Reaper Binder

The reaper binder is a harvesting machine that cuts and bundles crops in the field. It efficiently harvests grains, grasses, and other crops by cutting the stems and forming them into bundles.

## ADDITIONAL IMAGES

## Product Overview

### Efficient Grain Harvesting Solution

The Reaper Binder is a specialized harvesting machine designed to cut and bundle crops like rice, wheat, and barley into neat sheaves in a single operation. Built for small to medium-sized farms, it offers a robust, labor-saving solution that replaces manual harvesting with automated efficiency. With an adjustable cutting height and durable construction, it provides reliable performance across diverse terrains, including plains, slopes, and narrow fields.

## Technical Specifications

### Operational Features

- Adjustable cutting height for precision
- Low cut stubble performance
- Automatic bundling and tying mechanism
- Durable main structure for long service life
- Ergonomic operator controls and steering

<b>Compatible Crops</b>	Rice, Wheat, Barley, Grasses
<b>Field Conditions</b>	Plains, Hills, Slopes, Narrow Fields
<b>Model Identification</b>	4GK90

## Maintenance & Safety

### Designed for Reliability

The machine features a simple structure that facilitates straightforward installation and regular maintenance. By utilizing high-quality components, the design ensures minimal downtime and safe operation for the user in various field conditions.
