

Cross-Flow Blower Fan for Appliances

This cross-flow blower is designed for ventilation and air circulation in appliances. It features a multi-blade impeller within a robust metal frame, driven by a compact electric motor.

Product Overview

High-Efficiency Cross-Flow Blower

This cross-flow blower is engineered for optimal performance in heating and ventilation applications. Featuring a long impeller design, it delivers concentrated, long-range airflow while maintaining low noise levels. With a robust metal frame and multi-blade impeller, this unit is an ideal solution for confined spaces in appliances like heaters, stoves, and ovens.
