

# Cross Lug Wrench

The cross lug wrench is a specialized hand tool for loosening and tightening lug nuts on vehicle wheels. Its cross design provides leverage and balance for applying torque and removing stubborn nuts.

## Product Overview

### Versatile Automotive Tool

The cross-shaped lug wrench, often referred to as a spider wrench, is a specialized hand tool engineered for efficient loosening and tightening of vehicle wheel lug nuts. Its unique four-arm design provides optimal leverage and balance, allowing for the easy application of torque to remove stubborn nuts. Constructed from hardened steel, this tool ensures long-lasting durability and resistance to bending under high pressure.
