

Crown Flap Wheel

Crown flap wheels are abrasive tools used for grinding, blending, and finishing surfaces. The overlapping abrasive flaps provide a consistent cutting action and allow for controlled material removal, especially in corners and edges.

Product Overview

Crown Flap Wheel Utility

The Crown Flap Wheel is a versatile abrasive tool designed for professional grinding, blending, and surface finishing tasks. Featuring a unique crown shape, this wheel provides superior access to corners and edges that standard wheels cannot reach. It is engineered for consistent material removal across various substrates, including metal, wood, and plastic, making it an essential tool for metalworking, woodworking, and automotive industries.

Technical Details

Compatible Materials

- Metal
- Wood
- Plastic

Common Applications

Deburring, Polishing, Rust Removal, Surface Preparation, Blending, Paint Removal

Design Features

Design Advantages

Crown Shape • Overlapping Flaps • Consistent Cutting Action • Controlled Material Removal
