

CRT Monitor Circuit Boards

These circuit boards are extracted from a 100Hz CRT monitor. The boards manage video signals, power distribution, and display control.

Product Overview

CRT Monitor Circuit Board Assembly

These CRT monitor circuit boards are engineered for 100Hz display systems, managing critical video signal processing, power distribution, and display control. The assembly includes a primary yellow PCB populated with integrated circuits, resistors, capacitors, and transistors, alongside auxiliary boards connected via integrated wiring harnesses. Designed for high-performance CRT display maintenance or repair, this component set features a high-voltage cable assembly essential for proper monitor operation.

Refresh Rate	100 Hz

Technical Specifications

Assembly Features

High-voltage cable • Wiring harnesses • Heatsink

Board Configuration

Board Type	Primary Function
Main PCB	Power & Signal Management
Green Auxiliary Board	Signal Processing
Small Yellow Board	Heatsink Integrated

Included Components	Integrated Circuits, Resistors, Capacitors, Transistors, Connectors
