

CRT Monitor

This CRT monitor uses cathode ray tube technology to display images. It is a display device for showing visual information from computers and other electronic devices.

Product Overview

Professional CRT Display Monitor

This cathode ray tube (CRT) monitor provides a reliable display solution for professional and industrial environments. It features a classic design with a high-contrast dark bezel and a silver-colored lower section housing intuitive control buttons. The unit is supported by a stable black stand with a circular base, ensuring a secure footprint on any workspace.
