

CRT TV Flyback Transformer

High-voltage flyback transformer used in CRT televisions and monitors. It generates the high voltage required for the CRT's anode, typically in the kilovolt range.

Product Overview

High-Performance CRT Flyback Transformer

This high-voltage flyback transformer is designed specifically for CRT televisions and monitors. It efficiently generates the necessary high voltage for the cathode ray tube anode, ensuring stable and clear image output. Built with robust insulation and auxiliary voltage taps, it provides reliable performance in demanding broadcasting and display environments.

Technical Specifications

Key Features

- Multiple auxiliary voltage taps
- Adjustable focus output
- Adjustable screen voltage output
- High-voltage anode output
- Robust safety insulation

Operational Voltage

10 kV

Voltage Range

Application

CRT Television, CRT Monitor, Broadcasting Equipment
