

Crude Oil Salt Content Tester

This tester determines the amount of halide in crude oil and petroleum products. It can also estimate water turbine oil pollution and marine fuel oil.

Product Overview

Precision Salt Content Analysis

The Crude Oil Salt Content Tester is a specialized instrument engineered for the accurate determination of salt concentration in crude oil and petroleum products. Utilizing a conductivity-based method, this device ensures precise measurements essential for quality control in laboratory and field environments. Its robust design features a dual-cell configuration, which significantly enhances testing efficiency and throughput for professional applications.

Technical Specifications

Power Consumption

600 W

Electric Furnace Power

300 W

Extractor Heating Power (per unit)

Compliance Standard

GB/T6532

Power Supply

AC 220V \pm 10%, 50Hz
