

Crude Oil Tanker Ship

This large oil tanker ship is designed for transporting crude oil across oceans. It features a double hull construction for enhanced safety and environmental protection.

Overview

High-Capacity Crude Oil Transport

This large-scale crude oil tanker is engineered for efficient and secure long-haul maritime transport. Designed with a robust double hull construction, it prioritizes environmental safety and structural integrity during transit. The vessel is fully equipped with advanced navigation and communication suites, ensuring compliance with rigorous international maritime safety and pollution prevention standards.

Technical Specifications

Cargo Capacity

2000000 barrels

Capacity

Construction Type

Double Hull

Compliance & Systems

Onboard Systems

- Advanced Navigation Systems
- Advanced Communication Systems

Regulatory Compliance

International Maritime Regulations, Pollution Prevention Compliant
