

Crusher Blow Bars

These blow bars are used in mining or crushing applications. They feature a composite construction with a metallic striking surface bonded to a robust backing material.

Product Overview

High-Performance Crusher Blow Bars

These crusher blow bars are engineered as essential wear components for industrial crushing applications. Designed with a composite structure, they feature a specialized wear-resistant alloy striking surface bonded to a high-strength steel backing. This construction ensures durability and optimal performance in demanding mining and aggregate processing environments.

Technical Details

Part Identification

- K1906215-03
- PO 34695
- SCI-1900082001

Surface Coating

Corrosion Resistant • Protective Coating

Material Type

Wear-Resistant Alloy, High-Strength Steel, Composite

Application

Primary Application

Mining and Crushing Operations
