

Crystal Oscillator for Electronic Circuits

This crystal oscillator component is designed for precision timing. It features a hermetically sealed package ensuring environmental protection and reliable performance.

Product Overview

High-Precision Timing Solution

This high-stability crystal oscillator is an essential component for precision timing and frequency control in complex electronic circuits. It is meticulously engineered to provide reliable performance in demanding environments, ensuring consistent signal integrity. The hermetically sealed package provides superior protection against environmental factors, making it an ideal choice for a wide range of sensitive electronic applications.

Technical Specifications

Package Type

Hermetically Sealed

Application Suitability

- Precision timing circuits
- Frequency management
- High-reliability electronics

Part Identifier

101810

Core Functions

Precision Timing, Frequency Control
