

Curved Radiator Hose for Automotive Cooling Systems

This radiator hose circulates coolant between the engine and radiator in automotive cooling systems. It is constructed from durable rubber to withstand high temperatures and pressures.

Product Overview

Automotive Cooling Solution

This high-performance curved radiator hose is engineered for demanding automotive cooling systems. Designed to facilitate efficient coolant circulation between the engine and radiator, it provides a reliable pathway for heat management. Constructed from durable, high-grade rubber, this hose is built to maintain structural integrity under extreme operating temperatures and pressures.

Technical Details

Shape Configuration

- Curved profile
- Angled end
- 90-degree bend

| | |
|-------------|--|
| Material | High-durability rubber |
| Primary Use | Automotive Cooling, Engine Circulation |

Performance

Performance Features

High-Temperature Resistant • Pressure Resistant
