

Custom Aluminum Die Casting Mold

This custom aluminum die casting mold is designed for creating intricate parts. It is engineered for durability and efficiency in high-volume production.

Overview

Precision Die Casting Solutions

This custom aluminum die casting mold is engineered for high-precision industrial applications, supporting complex geometries and tight tolerances. Built for high-volume production efficiency, the mold features robust construction and multi-cavity designs to ensure consistent part quality throughout its extended lifespan. Our manufacturing processes integrate advanced machining techniques and rigorous testing standards to meet the demanding requirements of global automotive and electronic component markets.

Manufacturing Capabilities

Quality Management

- ERP System Integrated
- Standardized Process Management
- Advanced Laboratory Testing
- Continuous Process Innovation

Industry Applications

Automotive, Semiconductor, IC Connectors, Electrical Connection, Motor Fixed Rotor

Technical Specifications

Performance Highlights

2006 year

Established Experience

Core Design Features

High-Precision • Multi-Cavity • Durable Construction • Tight Tolerances
