

Customizable Welding Equipment

This equipment is designed for specialized welding applications. It can be customized to meet specific customer demands.

Product Overview

Industrial Welding Solution

This heavy-duty special welding equipment is specifically engineered for demanding industrial applications. It features a robust design capable of managing large, cylindrical, or complex structures through a specialized rotating platform system. Equipped with dual welding heads suspended from overhead gantries, it offers high-precision control for consistent and reliable fabrication results.

Technical Features

Key Components

- Rotating platform
- Dual welding heads
- Overhead gantry support
- Digital control panels

Design Type

Heavy-duty gantry-based welding system

Intended Use

Industrial welding, Cylindrical structures, Complex fabrication
