Product Overview

High-Efficiency Cutting Sewage Pump

The WQ-QG cutting sewage pump is an advanced submersible solution engineered for reliable wastewater management. It features a specialized cutting mechanism that effectively macerates fibrous solids and debris to prevent clogging. Designed for durability in harsh environments, it is suitable for residential, commercial, and industrial drainage applications.

Key Features

Performance Capabilities

- Integrated macerating cutting mechanism
- Submersible design for confined spaces
- Thermal overload protection
- Robust impeller for high flow rates

Target Applications

Municipal Wastewater, Industrial Effluent, Agricultural Irrigation, Residential Drainage

Technical Specifications

Solids Handling

- Rags
- Plastics
- Fibrous materials

Operational Advantages

Feature	Benefit
Submersible	Easy installation and operation
Cutting Mechanism	Prevents clogging and downtime
Thermal Protection	Prevents motor overheating
