

Cylinder Block Surface Grinding Machine

This machine is used for grinding the connecting surface between cylinder bodies and cylinder covers of various engines. It restores working accuracy by grinding or milling the surface, and can also grind other parts when equipped with an electromagnetic chuck.

Product Overview

Precision Surface Grinding

This cylinder block surface grinding machine is engineered for high-efficiency and accurate material removal, making it an essential tool for automotive and industrial engine rebuilding. Featuring a robust construction, the machine ensures exceptional stability and durability to deliver consistent, high-quality surface finishes. It is equipped with an intuitive control panel that allows for precise adjustments, accommodating various cylinder block sizes and materials with ease.

Service & Support

Warranty Support

- Free replacement parts during the warranty period
- Cost-price replacement parts available after the warranty period
- Lifetime technical support with quick response times
- Overseas after-service centers available in select regions
- On-site engineer service available upon request (customer covers associated costs)

Service Features

Lifetime Support, Overseas Service, Technical Assistance, Warranty Included
