

Cylinder Liner for BFM1013 Engines

This cylinder liner is designed for BFM1013 engines. It is constructed from high-strength materials to withstand high temperatures and pressures within the engine cylinder.

Overview

High-Performance Cylinder Liner

This precision-engineered cylinder liner is specifically designed for BFM1013 engines, offering a durable internal surface for piston movement. Constructed from high-strength materials, it is built to withstand the rigorous temperatures and pressures of heavy-duty engine operation. The component features a honed surface finish that optimizes piston ring sealing, improves heat dissipation, and reduces friction to enhance overall engine efficiency.

Technical Specifications

Material Characteristics

- High-strength construction
- Excellent heat dissipation
- Superior wear resistance

Engine Compatibility

BFM1013

Surface Treatment

Precision honed for improved oil retention and reduced friction

Application & Usage

Primary Applications

Engine Rebuilds • Maintenance • Repair

Key Benefits

- Improved fuel efficiency
- Reduced oil consumption
- Reduced emissions
- Prolonged engine life
