

Cylinder Y Valve for Liquid and Vapor Refrigerant

This valve automatically opens or closes when the pressure reaches the specified condition. It is designed for use with liquid and vapor in reusable cylinders within HVAC&R systems.

Product Overview

Professional Refrigerant Management

This Y-valve is engineered for precise control of liquid and vapor refrigerants in reusable cylinder systems. It is specifically designed to facilitate efficient flow regulation within HVAC&R applications. The valve features automatic pressure-sensitive functionality, ensuring reliable operation and safety during refrigerant transfer.

Compatibility & Specifications

Compatible Cylinder Sizes	30LB, 50LB
---------------------------	------------

Operational Features

Pressure Control

- Automatic opening for delivery pressure
- Automatic closing when pressure reaches safety level

Application	Liquid and Vapor Refrigerant Systems
-------------	--------------------------------------
