

Cylindrical Component Split Clamp Connector

This metallic accessory connects two cylindrical components using a split clamp design. It features parallel bores and is secured with screws for a tight connection.

Overview

Robust Cylindrical Connector

This metallic hardware accessory is expertly engineered for securely connecting two cylindrical components. Featuring a precision split clamp design with two parallel bores, it ensures a tight, reliable fit for demanding industrial applications. Constructed from durable metal, this connector provides the structural integrity required for robust joining of cylindrical elements.

Design & Construction

Design Type	Split Clamp
Bore Configuration	Parallel Dual Bore
Material	Durable Metal
Fastening Method	Screw-secured

Application

Primary Application	Cylindrical Component Joining, Industrial Hardware, Mechanical Assembly
