

Cylindrical Grinding Machine

This precision cylindrical grinding machine is designed for high-accuracy material removal. It is equipped with a coolant system and control panel for operational adjustments, making it suitable for machining cylindrical and conical surfaces with tight tolerances.

Overview

Precision Cylindrical Grinding Machine

This precision cylindrical grinding machine is engineered for high-accuracy material removal, making it an ideal solution for industrial machining needs. It features a robust machine bed designed for stability, alongside a grinding wheel head with adjustable speed settings for versatile operation. The system includes a worktable capable of precise longitudinal movement and is fully equipped with an integrated coolant system and a user-friendly control panel for fine-tuned operational adjustments.

Technical Capabilities

Operational Features

- Adjustable grinding wheel speed
- Longitudinal worktable movement
- Integrated coolant system
- Centralized control panel

Machining Applications

Cylindrical Surfaces, Conical Surfaces, High-Accuracy Finishing
