

Cylindrical Grinding Wheel

Cylindrical grinding wheels are precision abrasive tools designed for cylindrical grinding machines. These wheels achieve high precision and fine surface finishes on cylindrical workpieces.

Overview

Precision Cylindrical Grinding Solutions

These external cylindrical grinding wheels are precision-engineered abrasive tools designed for high-performance cylindrical grinding machines. They are manufactured from high-quality abrasive grains and durable bonding materials to ensure consistent performance and longevity. Designed for industries requiring tight tolerances, they are ideal for achieving superior surface finishes in automotive, aerospace, and precision engineering applications.

Technical Specifications

Construction

- High-quality abrasive grains
- Engineered bonding material

Suitable Industries

Automotive, Aerospace, Precision Engineering

Primary Function

High precision and fine surface finishing on cylindrical workpieces
