

Cylindrical Hand Dryer Heating Component

This is a cylindrical component designed for use in electric heating hand dryers. It features a white ceramic or plastic body with visible electrical contacts and a central opening.

Overview

Professional Heating Component

This cylindrical heating component is engineered specifically for integration into electric hand dryers. Designed with durability and efficient thermal performance in mind, it features a robust housing suitable for sustained operation in commercial or residential environments. Its compact form factor ensures compatibility with standard hand dryer assemblies, facilitating straightforward maintenance and replacement.

Technical Specifications

Design Features

- Cylindrical housing
- Integrated electrical contacts
- Central airflow opening

Application Category	Electric Hand Dryer, Household Electrical Appliance
Body Material	Ceramic/Plastic Composite
