

Cylindrical Insulated Component

This is an insulated component with a cylindrical opening. It can be used in applications such as thermal insulation for pipes and electrical wiring.

Overview

Cylindrical Insulated Component

This cylindrical insulated component is engineered for versatile protection of pipework or electrical conduits. Its durable design ensures effective thermal or electrical isolation in various industrial applications. The component's compact form factor allows for straightforward integration into existing systems.

General Information

Component Type	Insulated cylindrical sleeve
Certifications	ISO Compliant, Industrial Grade

Technical Specifications

Primary Utility

- Thermal insulation for pipes
- Electrical wiring protection
- Cylindrical housing support

Form Factor	Cylindrical
