

Cylindrical Lithium Battery Winding Machine

This automated winding machine is designed for cylindrical lithium battery production. It uses intelligent controls to ensure precise winding and consistent quality.

Overview

High-Efficiency Winding Solution

This automated winding machine is specifically engineered for the high-volume manufacturing of cylindrical lithium batteries. It features intelligent control systems that ensure precise winding accuracy and consistent quality output across production cycles. Designed for industrial durability, the machine combines robust construction with a user-friendly interface, allowing for efficient operation and real-time process monitoring.

Technical Specifications

Model Number	HMZJ-18650
Primary Application	Cylindrical Lithium Battery, Battery Assembly, Industrial Manufacturing

Key Features

Automation Level

Fully Automatic • Intelligent Control

Operational Benefits

- Precise winding control
- Consistent quality output
- High-volume manufacturing capability
- User-friendly interface
