

Cylindrical Metal Component Set with Blue Coating

This set includes precision-engineered cylindrical metal components with a blue coating. The varying lengths and diameters suggest a modular system suitable for industrial machinery and manufacturing processes.

Product Overview

Precision-Engineered Cylindrical Components

This set features high-quality cylindrical metal components designed for industrial machinery and precision engineering applications. Each piece is finished with a durable blue coating that aids in identification and provides surface protection. The variety of lengths and diameters allows for a modular assembly, making these components highly adaptable for complex manufacturing systems.

Physical Attributes

Surface Finish

Blue Coated • Machined

Design Features

Threaded Ends, Circumferential Grooves, Cylindrical, Modular

Usage Information

Industry Applications

- Industrial Machinery
- Manufacturing Processes
- Precision Engineering Assemblies
